

How to Graph Linear Functions-Basic Overview Graphing Calculator Worksheet

Use the graphing calculator to graph the following functions. Once the line is graphed sketch the graph on an appropriate window. Identify the window used and then use the trace key to determine the approximate value of the x-intercept.

Example: $y = -2x + 3$

Xmin= ___ -10 ___

Xmax= ___ 10 ___

Ymin= ___ -10 ___

Ymax= ___ 10 ___

Approximate value of
the x-intercept:

_____ 1.49 _____

1. $y = \frac{2}{3}x - 4$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

2. $y = -\frac{4}{3}x + 8$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

3. $y = -2x + 24$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

4. $y = \frac{5}{2}x - 16$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

5. $y = -\frac{1}{3}x + 5$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

6. $y = \frac{3}{2}x - 18$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:

7. $y = -\frac{7}{3}x + 50$

Xmin= _____

Xmax= _____

Ymin= _____

Ymax= _____

Approximate value of
the x-intercept:
